

# COMPONENTS OF THE FUTURE

Some fields of action in the energy sector's move to digitalize

- big data issues
- blockchain technologies

charging and  
payment  
administration

peer to peer  
or market to  
peer trading

communication  
bandwidth

simulation  
processes by  
artificial  
intelligence

sensors  
and Internet  
of things

prosumers'  
excess capacity  
sales

energy  
optimization  
behind the  
meter

chips and  
networks

asset and  
commodity  
management

distribution  
system  
management

data  
processing and  
storage

cyber  
security
